Finite size scaling of m in heat-bath Ising model

Legend:
- × $L(T - T_c) = -2.777777777777777$
- —   Fit: $-0.09978140561249874 \ln(L) + 0.133149701594735$

x-axis: $\ln(L)$
y-axis: $\ln(E(m))$
